

■ Consumer devices ■ Networking ■ Datacenters

(a) Optimistic ICT energy projection

2030 share:
≈ 7% of global
electricity demand

(b) Expected ICT energy projection

2030 share:
≈ 20% of global
electricity demand

Fig. 1. Projected growth of global energy consumption by information and computing technology (ICT). Values are shown for consumer devices, networking infrastructure, and datacenters under optimistic and expected projection scenarios. By 2030, ICT is estimated to account for approximately 7% and 20% of global electricity demand, respectively.
